Numerous clinical studies have documented that the Omega-3 fatty acids found in fish oil support immunity, joint health, metabolism and mood, but many variables affect the digestion, assimilation and bio-availability of fish oil.

In fact, a recent trial at the Essential Health Center for Nutritional Studies in Glasgow, Scotland, a renowned center for lipid biochemistry, found the total percentage of serum phospholipids to reach the bloodstream was ten times greater in those taking **Omega Swirl** than in those taking the same dose of standard fish oil.

Omega Swirl is an emulsified fish oil pre-micronized into tiny molecules, allowing for rapid digestion, absorption and bio-availability at the cellular level. In lemon, key-lime or peach-mango flavor, **Omega Swirl** is delicious-tasting with no fishy aftertaste and a smoothie-like texture that's easy to take (even for kids), tummy friendly and proven to deliver benefits better than other fish oil.

As always, we guarantee your satisfaction.
