

# Health Matters

by  
Patsy Meridith, C.N.C.  
Owner of  
Natural Foods Market

Summer is the time you want to be outdoors, so you know how important it is to have a safe, reliable insect repellent, especially to protect you from diseases carried by mosquitos and other insects. They say half of all bites occur through your clothing.

A report from Duke University cautions that ordinary **insect repellents** containing D.E.E.T. can have damaging effects on brain cells, especially those of children, who are typically more susceptible to such toxic types of chemicals. The safety of D.E.E.T. has been questioned for decades due to its adverse effect on the human nervous system.

Our natural insect repellents such as **Buzz Away, Badger** and **Greener Ways** contain no harmful chemicals - only natural essential oils, such as citronella, cedar, lemongrass and geranium. Effective, long-lasting, pleasant smelling and non-toxic, these **natural insect repellents** protect against mosquitoes, fleas and other insects. Safe for any age and pets, too.

As always, we guarantee your satisfaction.

**Locally owned for 36 years**
