Natural Foods Market

Spending time outdoors with our pets is a lot of fun, but, unfortunately, fleas and ticks are unavoidable. More than just a nuisance for our pets, they can infest our homes, cause allergic dermatitis and transmit diseases. A female flea can lay up to 2000 eggs over her lifetime, so controlling them takes vigilance.

Averting an infestation of fleas and ticks is easy with an all-natural product called **Wondercide Flea & Tick Control**, a non-toxic formula containing the natural power of cedar oil, which repels these pesky critters, as well as kills them. Conventional pesticides containing neurotoxins can cause serious health problems for our pets.

Safe to use directly on pets or on carpeting and pet's bedding, **Wondercide** rids them of fleas and prevents their return. It's non-staining and dries clear. In fact, you can use **Wondercide** without worry inside or outside your home around food, plants, pets and/or children. It's easy, safe and effective.

As always, we guarantee your satisfaction.
